This MSS Standard Practice was originally developed under the consensus of the MSS Technical Committee 114 (*Steel Valves*) and the MSS Coordinating Committee. In 2012, responsibility for this Standard Practice, and the current revision, was transferred to the new MSS Technical Committee 409 (*Knife Gate Valves*); with the MSS Coordinating Committee continuing to provide final review and approval. Future development and maintenance of this Standard Practice will be conducted by the new MSS Technical Committee 409. In addition, this Standard Practice was approved by an MSS Consensus Committee and ANSI as an American National Standard. The content of this Standard Practice is the resulting efforts of knowledgeable and experienced industry volunteers to provide an effective, clear, and non-exclusive standard that will benefit the industry as a whole. This MSS Standard Practice describes minimal requirements and is intended as a basis for common practice by the manufacturer, the user, and the industry at large. It is the responsibility of the user of this Standard Practice to establish appropriate safety and health practices and determine the applicability of regulatory requirements prior to use. The existence of an MSS Standard Practice does not in itself preclude the manufacture, sale, or use of products not conforming to the Standard Practice. Mandatory conformance to this Standard Practice is established only by reference in other documents such as a code, specification, sales contract, or public law, as applicable. MSS has no power, nor does it undertake, to enforce or certify compliance with this document. Any certification or other statement of compliance with the requirements of this Standard Practice shall not be attributable to MSS and is solely the responsibility of the certifier or maker of the statement.

"Unless indicated otherwise within this MSS Standard Practice, other standards documents referenced to herein are identified by the date of issue that was applicable to this Standard Practice at the date of approval of this MSS Standard Practice (see Annex A). This Standard Practice shall remain silent on the validity of those other standards of prior or subsequent dates of issue even though applicable provisions may not have changed."

By publication of this Standard Practice, no position is taken with respect to the validity of any potential claim(s) or of any patent rights in connection therewith. MSS shall not be held responsible for identifying any patent rights. Users are expressly advised that determination of patent rights and the risk of infringement of such rights are entirely their responsibility.

For all MSS Standard Practices, the term "shall" means "must" and "shall not" means "must not".

In this Standard Practice, all text, notes, annexes, tables, figures, and references are construed to be "normative" and essential to understand the standard's message. All appendices and footnotes, or any other information denoted as "supplemental", that may be included within this Standard Practice, DO NOT involve mandatory or normative requirements.

The U.S. customary units and SI (metric) units included within this Standard Practice are regarded separately as the standard; each should be used independently of the other and may not be technically equivalent. Combining or converting values or tolerances between the two systems may result in non-conformance with this Standard Practice.

This Standard Practice has been substantially revised from the previous 2016 edition. It is suggested that if the user is interested in knowing what changes have been made, that direct page by page comparison should be made of this document and that of the previous edition.

Non-tolerance dimensions in this Standard Practice are nominal unless otherwise specified.

Excerpts of this Standard Practice may be quoted with written permission. FOREWORD

This MSS Standard Practice, SP-135, is widely used in multiple valve and piping industries and is aligned with the Class-rated design, testing and material requirements of ASME B16.34, and the Class rated pressure, temperature, and dimensional requirements of ASME B16.5 and ASME B16.47. MSS SP-135 is the principal ASME Class rated knife gate valve standard and it is widely accepted as the principal Knife Gate Valve standard for industry users that include: paper, chemical, petro-chemical, hydroelectric power, mining and mineral processing, and fossil fuel power valve and fittings systems.

MSS Standard Practice SP-135 was originally published in 2006 as SP-135-2006, *High Pressure Steel Knife Gate Valves* for the purpose of addressing an industry need for a knife gate valve standard that involved high pressure and a Class rated design.

The revised 2010 edition of SP-135 revised the title slightly and expanded the valve NPS (DN) coverage; including two (2) sets of Face-to-Face dimensions (Short and Long Pattern). The original one (1) set of Face-to-Face dimensions included in the introductory 2006 edition of SP-135 was retained and rearranged in the tables of the revised 2010 edition of SP-135 as follows:

<u>CLASS 150:</u>		<u>CLASS 300:</u>	
NPS \leq 24 (DN \leq 600)	Long Pattern	All NPS (All DN)	Long Pattern
NPS $>$ 24 (DN $>$ 600)	Short Pattern		

The 2016 edition of MSS SP-135, in addition to various editorial and formatting updates, included: (1) revisions to tables and numbering; (2) an additional Section 5.2.2 marking option; (3) inclusion of NPS 2 (DN 50) through NPS 36 (DN 900) Class 600 valve dimensions in revised scope, body text, and new Tables 3/3M; (4) editorial clarification of several table headings and notes; and (5) updating of the organizations and references in Annex A. This edition was also approved by an MSS Consensus Committee and ANSI as an American National Standard.

This 2021 edition of MSS SP-135, in addition to various editorial and formatting updates, included: (1) Additional Section 7.5.2; (2) Addition of ASME B16.34 Appendix VI, Tables VI-1 and VI-2; (3) Added the testing requirements of MSS SP-151 to Section 10; and (4) Updating of the organizations and references in Annex A. This edition was also approved by an MSS Consensus Committee and ANSI as an American National Standard.

PREFACE

Technical Committee Membership

The MSS Technical Committee 409, *Knife Gate Valves*, has primary responsibility for this Standard Practice and included the following members at the time of approval:

Jim Barker, Chair
Vacant, Vice-Chair
Richard Kovacs, SP-135-2021 Task Group Chair

Srinivasan A.V. , LVSA Group	Al Libke , DeZURIK, Inc.
Jose Avalos , Neway Valve International	Travis Miles , Wey Valve, Inc.
Tommy Baldwyn , Wey Valve, Inc.	Ian Murphy , Weir Minerals
Jim Barker , DeZURIK, Inc.	Vahe Najarian , Velan, Inc.
Wayne Biery , Victaulic Company of America	Tim O'Shea , Val-Matic Valve and Manufacturing Corp.
John Bolender , J & S Valve, Inc.	Bradley Okeley , DSS Valves
Kim Burton , Burton Consulting	Jim Pellegrini , DSS Valves
Ian Cheng , Neway Valve International	Gil Perez , Velan, Inc.
Zach Cresap , Wey Valve, Inc.	Sagren Pillay , LVSA Group
Stephen Dalton , Val-Matic Valve and Manufacturing Corp.	Bradd Ripley , Victaulic Company of America
Carlos E. Davila, PE , Crane ChemPharma & Energy	Trent Runyon , DSS Valves
Steve Donohue , ITT Corporation	Keith Spaulding , Bray International, Inc.
David Gambetta , Mueller Co. LLC	David Swartzentruber , J & S Valve, Inc.
Paul Gifford , Mueller Co. LLC	Kevin Swicegood , Flowserve Corp.
Michael Gordon , Emerson Automation Solutions Final Control US LP	Ram Viswanathan , Bray International, Inc.
Heath Gunderman , A.W. Chesterton	Foster Voelker , William E. Williams Valve Corporation
Ian Hardy , Bray International, Inc.	Ross Waters , Hy-Grade Valve, Inc.
Peter Hirst , Rotork Controls, Inc.	John Wilber , American AVK Company
Richard Kovacs , ITT Corporation	Peter Woodhead , Emerson Automation Solutions Final Control US LP

In addition, the technical committee chair and MSS convey particular recognition to the following individuals for their distinct contribution and/or participation in the revision of this American National Standard:

Richard Kovacs, ITT Corporation
Jim Barker, DeZURIK, Inc.
Al Libke, DeZURIK, Inc.

Tim O'Shea, Val-Matic Valve and Manufacturing Corp.
Bradley Okeley, DSS Valves

About MSS

The Manufacturers Standardization Society (MSS) of the Valve and Fittings Industry is a non-profit technical association organized for development and improvement of industry, national and international codes and standards for Valves, Valve Actuators, Valve Modifications, Pipe or Tube Fittings, Flanges, Pipe or Tube Hangers and Supports, Springs, Fasteners, Spring Washers, and Associated Seals. Since its establishment in 1924, MSS has been dedicated to developing standards for national and global applications, in cooperation with other standardizing bodies and regulatory authorities.

MSS is an American National Standards Institute (ANSI)-accredited standards developer.
